

CPS BHAPC Full Random Effects Analysis

Model: $\text{srh} \sim \text{InWt} + (1|\text{age_group}) + (1|\text{period_4yr}) + (1|\text{cohort_4yr})$ | N = 199,605 | adapt_delta=0.95, iter=5000

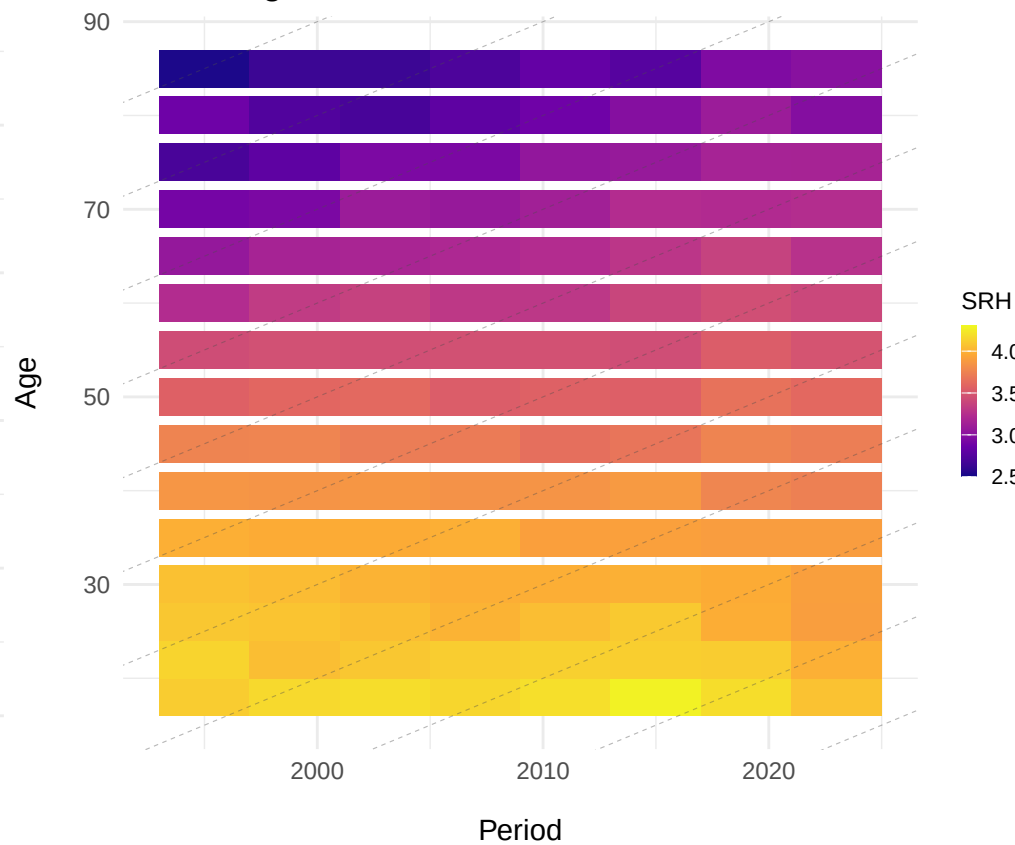

Variance Decomposition

Component	Var	%
Cohort	0.011	0.8%
Age	0.247	18.8%
Period	0.001	0.0%
Residual	1.056	80.3%

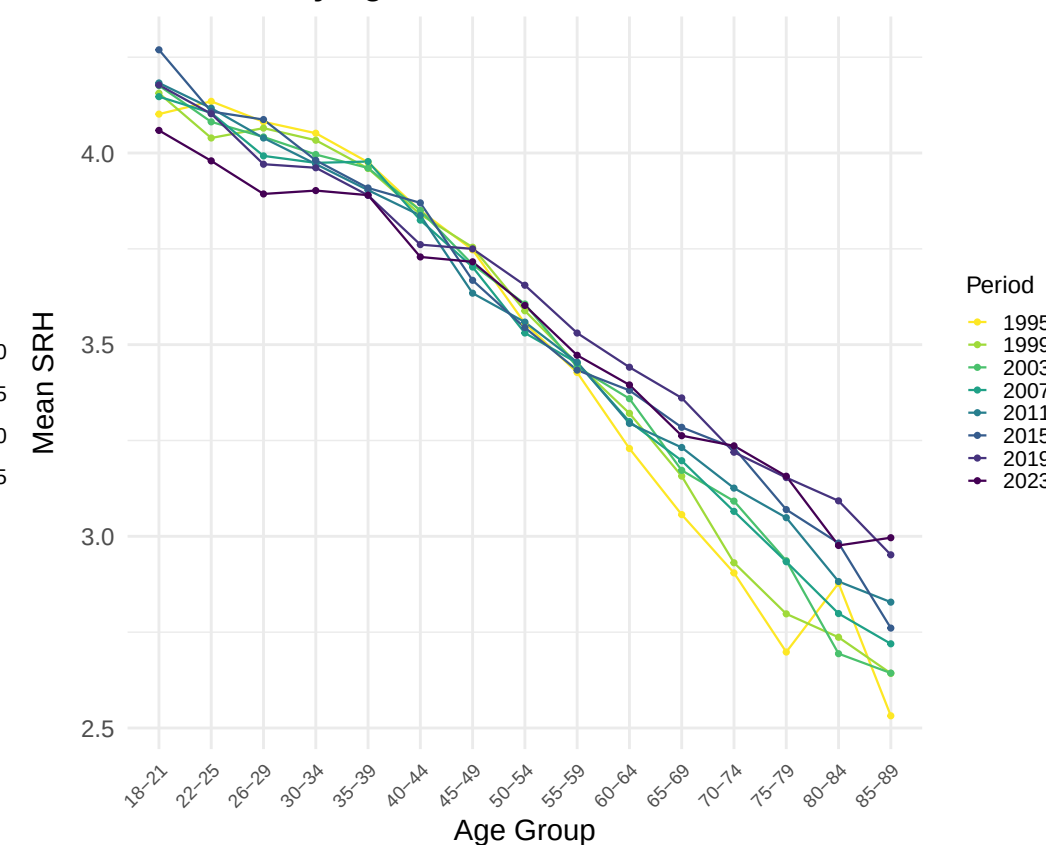

Variance by APC

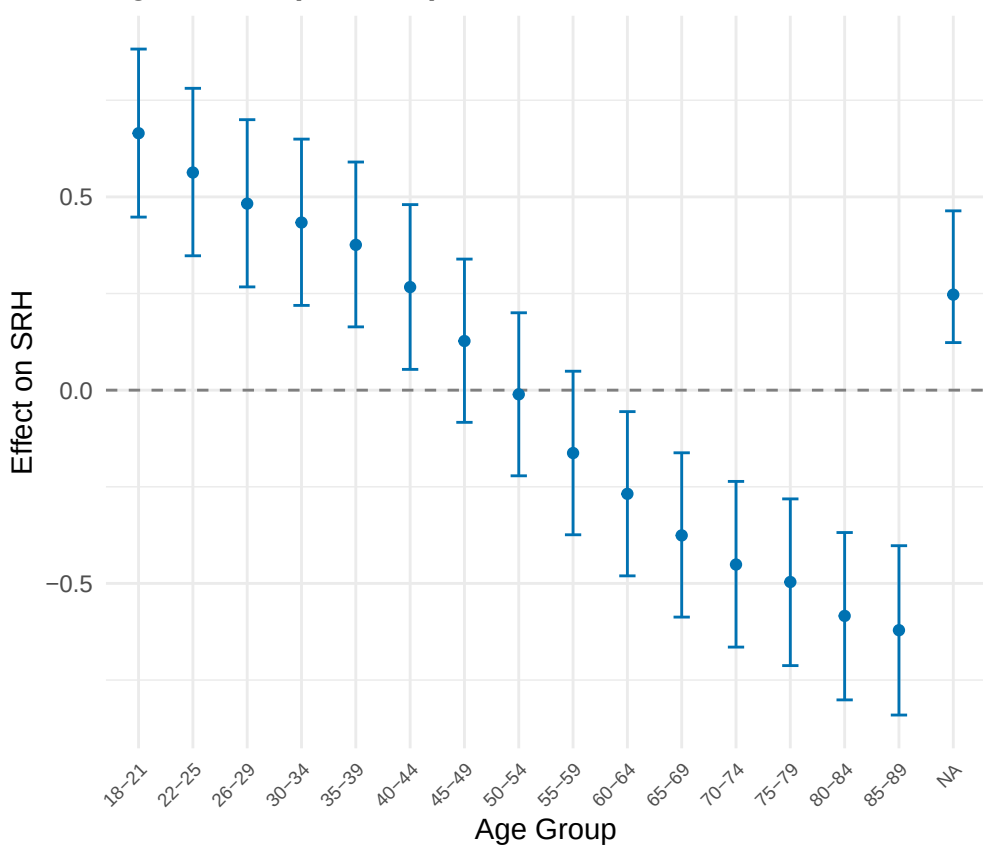

Lexis Diagram

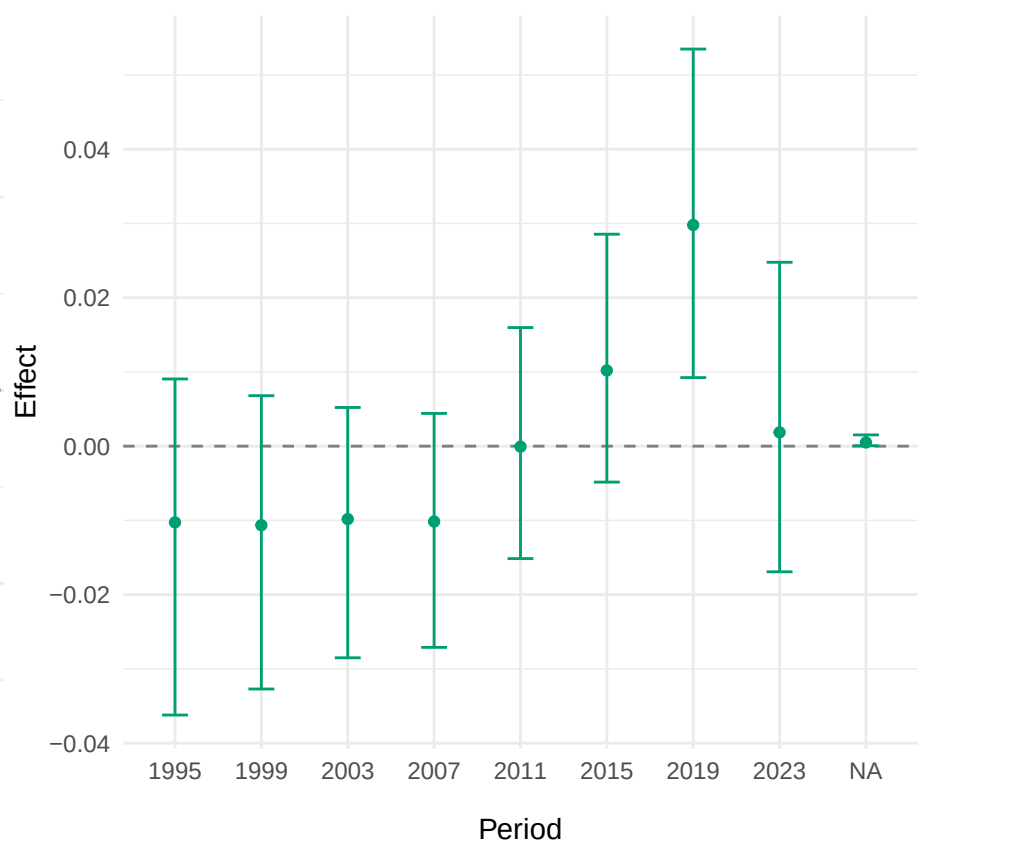

Mean SRH by Age & Period

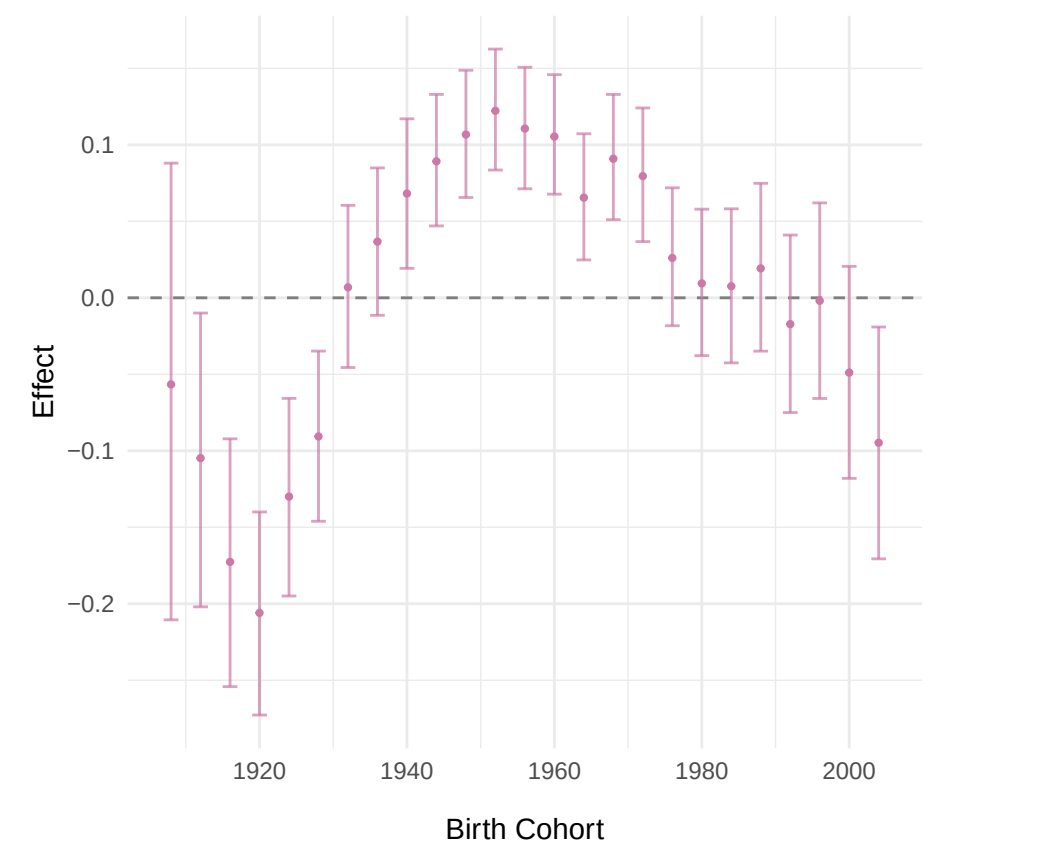

Age Effects (Random)

Period Effects

Cohort Effects

Higher SRH = better health. Error bars show 90% CIs. All APC components treated as random effects
